

CUSTOMER

CONDUIT

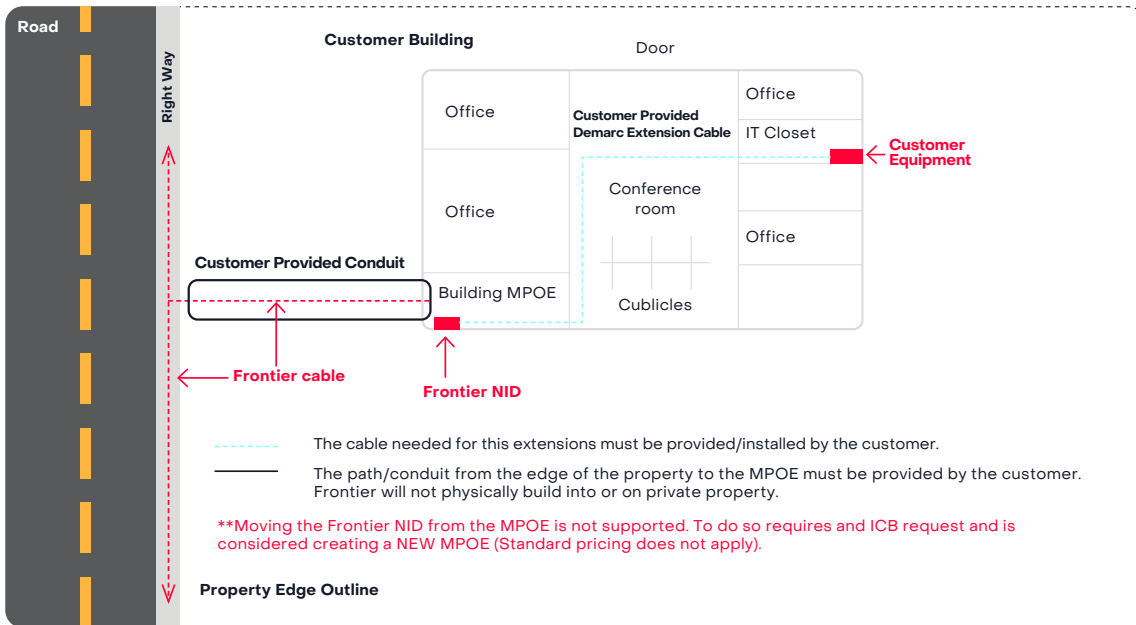

AGREEMENT

Conduit Requirements:

Frontier build pricing is structured to the existing minimum point of entry ("MPOE") /Demarc or the Right Of Way at the edge of Customer's property; if the MPOE/Demarc (more, specifically the required facilities) do not exist, Customer shall be responsible, at its own expense, to provide external and/or internal conduit required on private property for Frontier cable placement. For existing conduit to be usable, it must be empty of cables that have working circuits and the available space inside needs to meet Frontier standards. Any other path or cable installation adjustments(i.e., aerial delivery) must be confirmed and approved by the order site walk engineer.

Cable Extensions:

Frontier does NOT provide cabling or demarc extensions; we deliver to the designated demarc/MPOE only. The customer must extend from that location as needed. The customer should review their site in advance to determine where the MPOE is and what their cable extension cost will be. This is especially critical in multi-tenant buildings. The circuit hand off selection may be impacted based on the distance from MPOE to where the customers equipment is. The only exception is for products that may include some level of site cabling as part of the approved Frontier offering. See graphic below for details.

If you need assistance or have questions on these topics, please ask to be put in touch with a Solutions Engineer.
